Professional Summary

Driven Computer Science student with a strong focus on frontend web architecture, immersive UI/UX design, and backend system integration. Experienced in translating complex logic into user-centric applications, blending interactive interfaces using React and Three.js with robust backend engineering in C and Python. A collaborative problem-solver eager to build scalable software and continuously evolve as a full-stack developer.

Skills & Achievements

- **Core Languages:** HTML5, CSS3, Java, Python, C
- **Familiarity & Tools:** JavaScript, React.js, Three.js, Git, GitHub, MySQL
- **Core Concepts:** UI/UX Design, Web Page Structuring, Object-Oriented Programming (OOP)
- **Achievements:** 1st place - App Development Competition [App-E-Teaser] (JISTech 2K26),
2nd Runner-Up - Theme Based Project [AI Enabled System] (JISTech 2K26),
3rd Runner-Up - Crazy Build 2K26

Top Projects

Maargdarshan | AI-Enabled Smart Navigation Ecosystem

*React.js, JavaScript, Python,
HTML5, CSS3, Three.js, FastAPI*

(Team Project - Frontend Web Developer, UI/UX Designer & Backend Co-developer)

Live Prototypes: Website  | App  (*Prototypes in active Beta testing)

- **UI/UX & Interactive Styling:** Designed responsive UI components and thematic CSS styling, integrating fluid physics (satin/water effects) and custom interactive motifs (e.g., dynamic peacock feather cursor) for an engaging user experience.
- **Frontend Layout & Design:** Wireframed and co-developed the frontend visual architecture for the real-time caretaker web dashboard of a decentralized IoT navigation ecosystem.
- **Backend & Cloud Integration:** Engineered the Python-based server architecture (FastAPI) and cloud APIs, handling real-time software integration, secure data routing, and telemetry synchronization between the ESP32 hardware and the web dashboard.
- **Digital Twin Integration:** Assisted in integrating the WebGL 3D hardware mirroring interface into the dashboard to help visualize the physical orientation of the remote hardware.

Chanakya-AI | Real-Time Competitive Intelligence Engine

Next.js, React, Tailwind CSS

[Team Project - Lead Frontend Engineer (Dashboard) & UI/UX Developer]

- Engineered the complex frontend dashboard and Hacker Theatre UI for a multi-agent AI platform, translating overarching design blueprints into functional software.
- Implemented advanced glassmorphic state components and staggered CSS animation loops to visualize heavy server processing without blocking the client's main thread.
- Developed the interactive Self-Strategy data matrices and the real-time Global Context Chat interface, ensuring seamless state management and responsive rendering.

City Multi-Specialty Clinic | CLI Management System

C, File I/O, Data Structures

(Team Project - Core Backend Engineer)

- Programmed and integrated the C-based backend architecture, translating complex clinical workflow blueprints into fully operational, role-specific CLI dashboards.
- Executed critical data routing and flat-file I/O operations, optimizing memory management and debugging relational data loops to ensure stable, persistent patient records across the ecosystem.

Education

B.Tech in Computer Science and Engineering (2025-2029)

JIS College of Engineering, Kalyani

Pursuing

Interests

- Participating in Hackathons and Tech Communities
- Frontend Web Development & UI/UX Design
- Exploring Core Computer Science Concepts
